

Space Solutions

SYSTEM  180

Intelligent spaces for flexible work

Space Systems are increasingly being used in offices and public facilities. The room system from System 180 is among the most flexible on the market, meeting the modern requirement of many users to efficiently design spaces with minimal space requirements. In the past, drywall dominated room structuring, but today the use of modular room systems is taking center stage. The innovation of System 180's room system lies in the combination of static and mobile elements, enabling the design of everything from small work niches to large-scale segmentations.

Any work environment can be designed to be both functional and stylish. The mobile elements allow users to independently and flexibly adjust the room layout without altering the static structure.

For architects and planners, this system offers the opportunity to regularly review and adapt the room design in collaboration with users, ensuring that even limited spaces are utilized optimally.

Our versatile room settings, such as personal workstations, home offices, reception areas, lounges, coffee points, creative studios, Design Thinking workshops, classic meeting rooms, inspiring libraries, and multifunctional arenas, are now available as ready-made furniture configurations in pCon from System 180. These pre-configured settings make it easier to integrate our flexible furniture into your space planning, allowing for efficient and creative use of your spaces.

A good room system fulfills the following characteristics:

Flexibility

Repeated adjustments are possible without any loss of material quality.

Scalability

The same elements can be used in different project sizes (from small coffee points to exhibition stands, usable both indoors and outdoors).

Time and Cost Savings

Prefabrication of many components occurs in the factory, resulting in minimal material waste.

Design Freedom

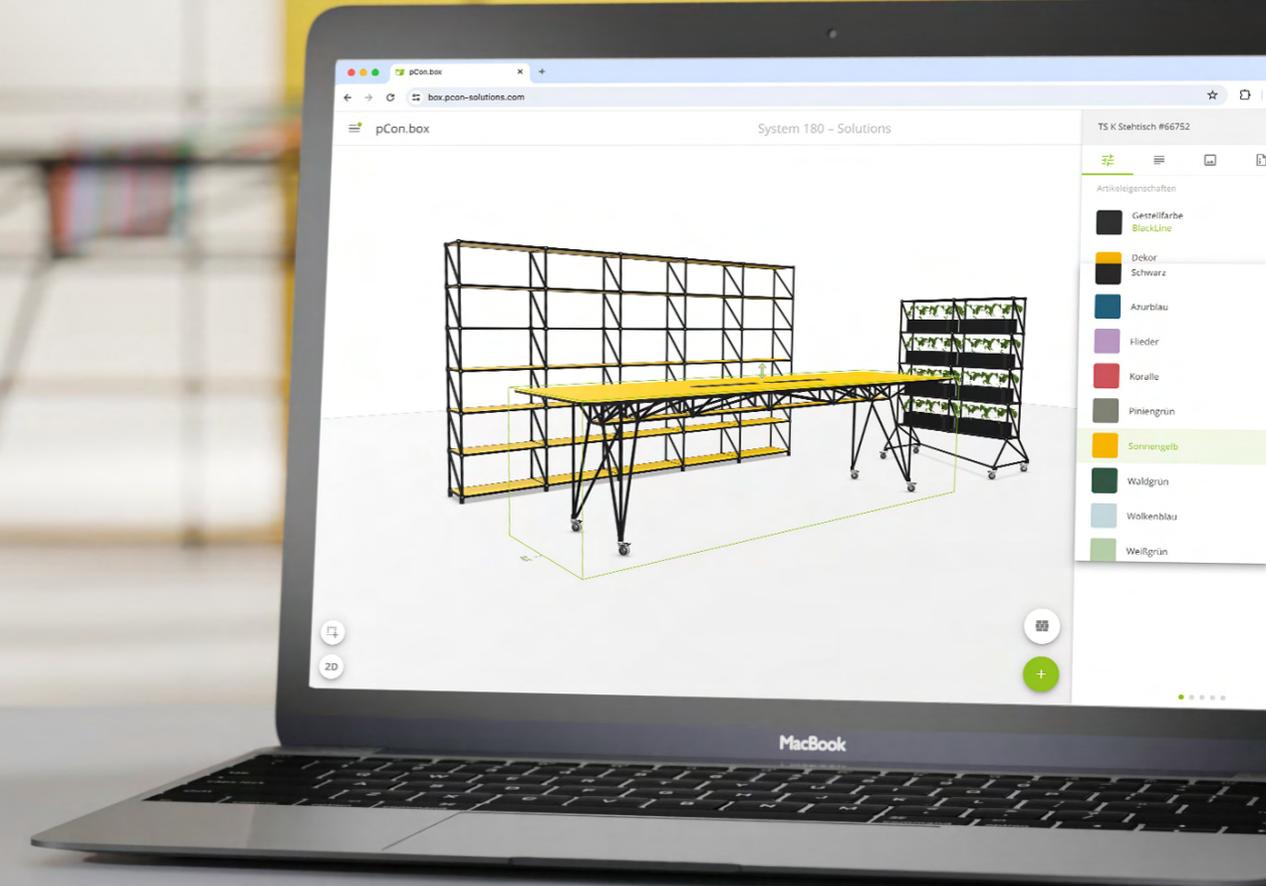

Individual and creative design is possible through a variety of colors, materials, and variations (straight and diagonal).

Sustainability

Low production of waste, as well as reuse and recycling of modules in other projects, are possible.

pCon.planner PRO

System 180 provides an extensive product catalog for pCon.planner PRO. The furniture of the Design Thinking Line®, a wide selection of Agile Interior products, and examples of the K table system, room dividers, and counters can be integrated into your space planning and individually configured with just a few clicks. Sideboards and shelves, with additional adjustment options, allow for the quick creation of shelving systems in the rooms to be planned. Surfaces

You can choose the pipe structure in the surface finish of brushed stainless steel (SteelLine) or black powder-coated steel (BlackLine).

SteelLine
Brushed stainless steel

BlackLine
Black powder-coated steel tube

Unidecors
Double-sided, easy-care melamine resin coated

Real Wood Veneers (on request)
Double-sided with fine real wood veneer and matt lacquered. Please note that real wood veneer is a natural material. The appearance and color of the veneers used may vary. Larger surfaces are made from individual panels that can differ in color and appearance. Real wood changes its color due to exposure to light.

Forbo Furniture Linoleum
For all table surfaces except configurations from the furniture construction system.
